Installation Guide

1. Connect the included USB4 Type-C cable to the host USB-C port of FireNEX™-UDC-40G, and the other end of the cable to the host PC.
2. Connect the device side USB-C port(s) to the USB peripheral(s).
3. Connect the included 19V power adapter to the power jack on the device side plate.
4. (Optional) If needed, mount the host side plate to the D-series XLR standard cut out with the two included M3 screws.

Note:

When connecting to a host with a USB4 or Thunderbolt port, the FireNEX™-UDC-40G must be used with a USB4-rated cable on the host side. A 20Gbps USB4 passive cable or active USB4 cable can be used to reach longer distances on the host side.

On the device side, either a USB4 or USB 3.2 cable may be used, depending on the requirements of the connected peripherals.
